TANUSHKA PADELKAR

Product Designer, UX/UI for Web & Mobile Products

Dublin, Ireland | work.tanushka16@gmail.com
linkedin.com/in/tanushka-padelkar | tanushkapadelkar.vercel.app

ABOUT

Product Designer with 4+ years of experience across ed-tech, energy, and travel, and an MSc in **Human-Computer Interaction** from University College Dublin. Turns complex workflows and data into clear **web and mobile** experiences in Figma, from early research and interactive prototypes to implementation-ready screens. Tests ideas with real users before they are built, and uses AI tools such as Claude and Lovable to reach a working prototype sooner. Works closely with engineers, founders, and product teams from the first problem through build and review, and cares about **accessible, inclusive design**. A **clear communicator** with a **keen eye for detail**.

EXPERIENCE

Loyalty Advisor | PrepayPower Yuno Limited

Feb 2026 – Present | Dublin

- Lifted retention credit uptake by **91%** and drove 165 savings sign-ups by analysing engagement data and redesigning the retention campaigns.
- Raised the campaign contact rate to **80%** by designing the auto top-up push-notification flow in the mobile app, from flow map to final Figma screens.
- Found friction points in the oil-delivery journey by combining **tank-sensor** data with regular conversations with customers, and turned them into **design recommendations**.

Lead Product Designer | Roamin (Freelance)

Sep 2025 – Feb 2026 | Dublin

- Validated an AI-powered fare-alert feature before development began by running near-weekly prototype tests with real users.
- Kept a growing travel platform consistent by building its **design system** from scratch as a Figma library of reusable components.
- Owned design from problem definition to production-ready Figma screens for **web and mobile**, and reviewed engineers' builds against the designs.

Senior UI/UX Designer | e-Careers Education Limited (UK)

Jul 2022 – Aug 2024 | Remote (India)

- Cut learner drop-off by **78%** by redesigning the CRM **workflows** and onboarding templates, and prototyping the improved journey in Figma.
- Brought student churn down by **55%** by designing **E-Bot**, an AI chatbot that let learners get answers with little typing and passed anything it couldn't answer to a tutor, and by helping train it.
- Let tutors and the video and content teams upload **12+ videos** a day without lag, kept course videos secure, and removed costly third-party subscriptions by leading the research, design, and testing of **E-Stream**, an in-house video library that replaced YouTube.
- Identified where students and tutors got stuck by interviewing them and running usability tests, then shaped design decisions around what the findings showed.
- Made the tutor panel consistent and accessible by building its Figma component library to **WCAG 2.1+** standards with engineers, and onboarded new designers onto it.

UX Designer | Freelance

Feb 2021 – Jun 2022 | India

- Contributed to a **40%** increase in sponsorship funding by redesigning a client website, from wireframes to final pages.
- Improved the visibility of an architecture firm's services by restructuring the layout and visuals of the Silverline website.
- Shaped client designs around user research, and helped organise and run UI/UX workshops.

PROJECTS

Snap Budget | Nomad Ireland Prototype Workshop

- Took a budgeting app from first idea to a working prototype at a 3-day **workshop** for non-technical founders: defined the system architecture and user workflow with the workshop lead, designed the screens in Figma, and built the prototype with Claude and Lovable.

Men's Mental Health Impact Tracker (MIND·CHECK) | Football Cooperative, with University College Dublin

- Shaped a tracker that players were comfortable using by running **focus groups** and interviews with players, the founder, and volunteers, plus EMA mood checks, then usability testing Figma prototypes with the players.
- Agreed four themes with the team by running a TMREC-approved survey and analysing it with reflexive thematic analysis in NVivo.
- Joined booking, payment, survey, and reminders into one participant journey across four systems (Flutter, Firebase, Firestore, Stripe).

Virtual Mouse Using AI | Viva Institute of Technology, India

- Built a **camera-based cursor control system** with computer vision and Python, designed for accessibility; received a consolation prize at CSI-VIVA Tech Research Paper Presentation.

EDUCATION

MSc Human Computer Interaction: University College Dublin, Dublin, Ireland
2024 – 2025 | Second Class Honours, Grade 1 (GPA 3.23/4.2)

BE, Computer Engineering: Viva Institute of Technology, India
2018 – 2022

SKILLS & TOOLS

Design & Research: user flows, wireframes, interactive prototypes, sketching and storyboarding, component libraries and design systems, responsive design across web, mobile, and tablet, accessibility (WCAG 2.1+, with working knowledge of WCAG 2.2 Level AA), usability testing and heuristics, interviews, focus groups, surveys, competitor analysis, thematic analysis.

AI & Prototyping: Claude, Claude Code, Lovable, Figma Make; turning rough concepts into interactive prototypes; HTML/CSS, basic JavaScript, Python.

Collaboration: working with engineers, product managers, founders, and content, marketing, and brand teams; implementation reviews against designs; running workshops; mentoring new designers; explaining design decisions to non-designers; fast-paced startup environments.

Tools: Figma (components, Variables, prototyping), FigJam, Framer, Spline, Photoshop, Illustrator, After Effects, NVivo, Google Analytics.

CERTIFICATIONS

- Interaction Design Foundation (IxDF): Master's Program in UI/UX Design
- Figma UI/UX Design Advanced, Udemy
- AI for Designers, IxDF
